Modules

Agents

Agent types

XML Agent

XML Agent

Some language models (like Anthropic's Claude) are particularly good at reasoning/writing XML. This goes over how to use an agent that uses XML when prompting.

```
from langchain.agents import XMLAgent, tool, AgentExecutor
from langchain.chat_models import ChatAnthropic
from langchain.chains import LLMChain
API Reference:

    XMLAgent from langchain.agents

    tool from langchain.agents

    AgentExecutor from langchain.agents

    ChatAnthropic from langchain.chat_models

    LLMChain from langchain.chains

model = ChatAnthropic(model="claude-2")
@tool
def search(query: str) -> str:
    """Search things about current events."""
     return "32 degrees"
tool_list = [search]
```

```
agent_executor = AgentExecutor(agent=agent, tools=tool_list,
verbose=True)
```

agent_executor.run("whats the weather in New york?")

```
> Entering new AgentExecutor chain...
 <tool>search</tool>
```

<tool_input>weather in New York32 degrees

<final_answer>The weather in New York is 32 degrees

> Finished chain.

'The weather in New York is 32 degrees'
